Business Profile

ITWorks is an IT company that provides different IT services such as application development, technical issues resolution, software support, Internet services, database services, and others. It operates across Australia with branches in major cities such as Adelaide, Brisbane, Melbourne, Perth, and Sydney.

ITWorks has around 133,240 external clients and has been providing services to them for the last five years. The company has been consistent in providing services and is facing tough competition in the industry.

ITWorks uses Help Desk software to manage internal and external client requests. When providing support to internal company staff, ITWorks specialists are attending clients in person or using remote access software when required to remotely resolve the issues. While providing support and communicating with the clients, different policies and procedures must be followed:

- Customer service policies and procedures
- Service Level Agreement
- Workplace health and safety (WHS) processes and procedures
- User Account and Password Policy
- Operating system requirements
- Other related policies, listed in the Appendix section of this document

Customer Service Policy and Values Statement

The ITWorks strives for excellence and professionalism in providing customer service, both inside and outside the organization, within the limits of available, well-managed resources.

To accomplish this mission, we agree upon these values:

- Anticipating the needs of our customers and planning accordingly
- Greeting our customers promptly, cheerfully and respectfully
- Listening carefully and considering the requests and concerns of our customers
- Communicating honestly, courteously, and knowledgeably
- Providing follow-through for our customers promptly, responsibly, and efficiently
- Serving with pride, commitment, and high ethical standards
- Respecting the individual and encouraging participation

Policy Statement

It is the ITWorks policy and responsibility to provide excellent service to the public. Customer feedback helps us measure whether our services are meeting public needs and expectations. It also helps us identify problems that need to be solved. High-quality customer service depends on customer feedback. While praise is always welcome, constructive criticism is truly helpful in the long run.

The purpose of this policy is to establish uniform standards and procedures for responding to customer feedback, thus making sure those responses are timely and that issues do not “fall through the cracks.” The policy strives to treat every interaction with the public as an opportunity to produce a satisfied customer, or at least one who feels that he or she was listened to and taken seriously, even if it was not possible to meet his or her request.

Customer feedback comes to the ITWorks in many ways. This policy outlines a procedure for responding to complaints, requests for service, and questions that come to the ITWorks Help Desk through a customer visit, call, letter, or email. Departments are expected to use similar standards and procedures for the complaints, requests, and questions that come directly to the department and not through the ITWorks Office.

The policy is not intended to cover:

- Complaints about the performance of specific employees, which are handled by the department manager in conjunction with the gym owner.
- Claims for damages, which are to be filed with the ITWorks Insurance carrier.

Service Level Agreement

The ITWorks as a Service provider will respond to service-related incidents and/or requests (High, Medium, Low priority) submitted by the Customer within the required time frames.

Response Standards

When possible, complaints, questions, and requests for service should be resolved in “real-time” on the same day they arrive. However, in many instances, referral and follow-up are necessary to fully understand and resolve the issue. In such instances, the following standards for acknowledgment and resolution should be followed.

Response Procedure

- Provide an acknowledgment to the client
- Analyse asset information for ICT hardware
- Diagnose hardware and software faults
- Research and recommend solutions
- Resolve requests/issues from clients
- Provide one-to-one instruction if required
- Inform the client about the results
- Collect and analyze client feedback for continual improvement purposes

Acknowledgment

- All complaints, questions, and requests for service should be acknowledged within one business day.
- This acknowledgment should note the person to whom the issue has been referred and when the customer can expect a response.
- If the customer's feedback is delivered by phone or in person, this acknowledgment should be given verbally during the call or visit.
- If the customer feedback is delivered by e-mail, the acknowledgment should be given by email.
- If the customer feedback is delivered by postal mail the acknowledgment should be sent via telephone, postal mail, or e-mail, whichever is appropriate.
- For written acknowledgments, templates with standard language should be used to minimize staff processing time.

Resolution

- A substantive response should be provided within seven business days.
- This response should include the ITWorks analysis of the issue and the proposed resolution. Clear reasons should be given if the ITWorks can't meet the customer's request.
- If a resolution is not possible within seven business days, the customer should be notified and given the date on which they can expect a response.
- The resolution can be communicated to the customer verbally, by e-mail, or by postal mail, depending on the communication method most appropriate to the situation.

Calls / Visits to the ITWorks Help Desk

- When a customer calls or visits the ITWorks Help Desk with a complaint, question, or request for service, the issue should be resolved immediately, if possible, by the ITWorks Help Desk or by referral to the appropriate department.
- If immediate resolution is not possible, the ITWorks Help Desk will take down the necessary information and let the customer know when and from whom he or she can expect a response.
- The department receiving the referral is responsible for resolving the issue with the above standards.

Logging Support Requests – Work Instructions

Create a new ticket (support request)

Access the Request/Incident Management section in Help Desk software and create a new ticket

Enter the request detail as required:

- Complete General Information section:
 - Organisation / Department
 - Client name
 - Origin, i.e., phone, email, portal
 - Create a Title for the ticket
 - Enter a description of the request/incident
- Choose Impact and Urgency level
- Choose the Assignee name
- Choose a category based on the description of the support request. Choose your best guess if unsure as this can change during the lifecycle of the support request.

Confirmation of receipt of support request

Once you have entered the support request details you must inform the client of receipt of the support request and the next action that will occur.

This is done via email so there is a record of the communication to the client that their request has been received.

E-mails or Postal Letters to the ITWorks Help Desk

- When customers send e-mail (or postal mail) to the ITWorks Help Desk with complaints, questions, and requests for service, the ITWorks Help Desk will send an acknowledgment e-mail (or postcard) within one business day.
- Of course, if the ITWorks Help Desk can answer the question or resolve the issue right away without a referral, it will do so and let the customer know. In such instances, a separate acknowledgment email (or postcard) is not necessary.
- Also, within the first business day, the ITWorks Help Desk will forward the item to the appropriate department for response, noting the expected resolution date.
- The department receiving the referral is responsible for resolving the issue with the above standards.

ITWorks must respond to the client using the following guidelines:

- Keep the subject of the email brief but relevant e.g., "Receipt of client support request X-YYY"
- Address the email to the Customer
- Include the expected action time (refer to ITWorks SLA)
- If the email is following up on an email begin by writing, "About your email message on (DATE) about (ISSUE), I would like to inform you that ..."
- Finish the email with "Your Sincerely"
- Run a spell check.

All emails should include the following email signature:

(ITWorks Officer Full Name)
ITWorks Service Desk Analyst

ITWorks
PO Box 99300
ADELAIDE SA 5000
Phone: (08)8220 0000
Web: www.itworks.com.au

Additional Comments

- Since customers do not always know to whom to direct their concerns, any staff member at a public counter or answering the phone is called upon to be a customer service agent. When transferring a caller, staff should always take the caller's number so that they can call back if need be.

Related documents

- For more details see the "ITWorks Practices and Communication Protocols" document.

Workplace health and safety (WHS) processes and procedures

This policy:

- Shows the commitment of ITWorks's management and workers to health and safety
- Aims to remove or reduce the risks to the health, safety, and welfare of all workers, contractors, and visitors, and anyone else who may be affected by our business operations
- Aims to ensure all work activities are done safely.

Management (the supervisor and/or manager) is responsible for providing and maintaining:

- A safe working environment
- Safe systems
- Plant and substances in a safe condition
- Facilities for the welfare of all workers
- Any information, instruction, training, and supervision needed to make sure that all workers are safe from injury and risks to their health

Employees are responsible for:

- Ensuring their health and safety, and that of others in the workplace
- Complying with any reasonable directions (such as safe work procedures and wearing personal protective equipment) given by management for health and safety.

Equipment

Monitor

- Incorrect positioning of the screen and source documents can result in awkward postures. Adjust the monitor and source documents so that your neck is in a neutral and relaxed position.
- Centre the monitor directly in front of you above your keyboard.
- Set the screen distance to approximately an arm's length away (350mm-750mm)
- Set the height of the monitor so that the top third of the screen is at eye level and the bottom of the screen can be read without having to incline your head. (If you wear bifocals, lower the monitor to a comfortable reading level.)
- Reduce glare by careful positioning of the screen.
- Place screen at right angles (90 degrees) windows
- Adjust curtains or blinds as needed
- Adjust the vertical screen angle and screen controls to minimise glare from overhead lights
- Other techniques to reduce glare include use of glare filters, light filters, or secondary task lights
- Position source documents directly in front of you, between the monitor and the keyboard using a stand.

Keyboard

- The keyboard should be detachable from the screen
- Place the keyboard at the front edge of the desk so that it is within range of your hands without straightening your elbows.
- Place the keyboard in a position that allows your forearms to be at a 90-degree angle and the wrists to be straight (hand in line with the forearm)
- Determine what section of the board you use most frequently and readjust the keyboard so that section is centered with your body.
- The keyboard angle should sit flat on the desk to help maintain a straight wrist position.

- Wrist rests can help to maintain neutral postures and pad hard surfaces. However, the wrist rest should only be used to rest the palms of the hands between keystrokes. Resting on the wrist rest while typing is not recommended. Wrist rests are primarily for periods of rest between bouts of typing.

Mouse

- Position the mouse as close as possible to the keyboard. Avoid reaching over the keyboard to use your mouse.
- Work with your shoulders relaxed.
- Keep your arm close by your side.
- Keep your wrist in a straight or neutral position.
- Lightly supporting your forearm on your armrest or desk can help you keep your shoulder relaxed.
- Do not twist or move your wrist from side to side, or up and down when working. Keep your hand relaxed. Move the mouse with the whole arm, using the elbow as a pivot point, keeping your wrist in a straight neutral position. Do not hold your pointing device with a tight grip.
- When not using the pointing device, let it go.
- Keep your fingers relaxed on the buttons without inadvertently pressing them.
- Keep your thumb relaxed. Do not keep your thumb in a bent position when using the mouse.
- Consider alternating between the left and right hand to reduce the workload and strain on the one hand. Use caution when switching hands, and make sure the device is made for the hand you are using. Give yourself time to get used to the change.

Slips, trips, and falls

Electric cables across passageways, mats, unexpected steps in poorly lit areas, slippery surfaces (e.g. marble floors in foyers), and storage that requires workers to use step ladders or reach above shoulder height can all raise the risk of people slipping, tripping, and falling. Serious injuries can be sustained as a result, so the office should be checked for such hazards, and any risks of slips, trips, and falls should be controlled.

Thermal comfort and air quality

A range of issues may need to be addressed, including temperature control, air-conditioning, air quality ozone levels, and the risk of conditions such as Legionnaire's disease and 'sick building syndrome'.

Electrical safety

Electrical appliances, power boards, and power cords should be checked and maintained in good condition and without overloading, as needed.

Preventing eye health problems related to computer use

- Use an appropriate computer screen
- Pay attention to workstation ergonomics
- Take care of glare and reflection
- Monitor and adjust the Intensity of lighting
- Use specialized software to reduce eye strain
- Take regular breaks from computer use
- Perform eye exercises regularly
- Wear glasses, not contact lenses
- Prevent dry eyes
- Take a yearly vision test

User Account and Password Policy

User Account Policy

- All computers must be configured with a Standard User Account for all staff
- IT Support staff must be allocated with administrator user accounts
- Users must accept the following legal notice at login:

"This system is restricted to authorised users. Individuals who attempt unauthorised access will be prosecuted. If you are unauthorised, terminate access now. Click OK to indicate your acceptance of this information."

- Remote assistance must be enabled on client computers.

Password Policy

Passwords must meet the following criteria:

- Password history – 10 passwords remembered
- Password age – 30/90 days
- It must be at least eight (8) characters long
- It must contain characters from at least three of the following four categories:
 - Uppercase letters (A – Z)
 - Lowercase letters (a – z)
 - Numbers (0 – 9)
 - Symbols or non-alphanumeric characters (e.g.: !, \$, #, or %)
- It cannot be blank
- It cannot contain three or more consecutive characters from your account name

Operating system requirements

Windows 11 is the standard requirement for all other users. Macintosh OS is used for the Design Lab.

OS Update Policy

- OS Updates automated
- When installing applications, the most recent versions and patches should be installed to reduce the risk of any application security vulnerabilities

Power setting

- All desktop computers must be set with the following power plan:
 - Turn off the monitor after 30 minutes
 - Put the computer to sleep after 1 hour
 - Turns off the hard drive after 1hr 30m

Threat protection

- All client computers must have all Windows Defender Anti-Malware (or 3rd party antivirus software if applicable) and Firewall Protection features enabled.

- Anti-malware software must be scheduled to complete the system scan every Friday at 8 pm
- Default web browsers must be configured to:
 - Prevent pop-ups
 - SmartScreen filter turned on for relevant browsers
 - Clear browsing history when the browser closes
- BitLocker is enabled on all drives.

Software Licensing

Software register – approved license software for ITWorks SOE

Software	Publisher	License/Version
Microsoft Edge	Microsoft	132.0.2957.115 (64-bit)
VLC media player	VideoLAN	3.0.7.1
Adobe Acrobat Reader DC	Adobe Systems Incorporated	17.009.20044
VMWare tools	VMWare Inc.	
Microsoft Visual C++ 2015-2022 Redistribute (x64)	Microsoft Corporation	
Microsoft Visual C++ 2015-2022 Redistribute (x86)	Microsoft Corporation	

Industry accepted Hardware

- HP Pro Mini 400 G9 Desktop PC + HP E24 G5 23.8-inch FHD Monitor (see Appendix below for specs.)
- Lenovo ThinkPad P16s Gen 3 Laptop
- Dell XPS 13 9350
- Apple MacBook Air with M3
- Ricoh Multifunction Printer IM C4510

Industry accepted Software

- Microsoft Office 365 includes Word, Excel, PowerPoint, Access OneNote, Outlook, Skype for Business.

Diagnostic Testing Procedures

Wireless Devices

- If Wireless connection – then confirm the connection
- Does the device need batteries, e.g. keyboards and mice?
- Is the wireless dongle plugged into the computer?
- Are drivers up to date?

Printers

- Confirm equipment is plugged in and receiving power.
- Are cables connected?
- Is the peripheral installed with updated drivers?
- Are any components missing or need refilling e.g. Print cartridges, paper?

Operating system

- Is there a suspected virus?
- Are there too many start-up programs slowing the boot process?
- Is the Hard Drive full?
- Is the RAM suitable for the task?
- Disable Fast Boot
- Increase virtual memory

Virus and malware symptoms

- Programs randomly opening and closing
- Files turned into shortcuts
- Slow computer
- Blue screen of death
- Lack of storage space
- Suspicious hard drive activity
- Pop-ups, websites, toolbars, and other unwanted programs
- Email client is sending spam

Diagnostic Tools to Support Preventative Maintenance

Windows inbuilt Diagnostics

- Windows Memory Diagnostic
- Windows Backup and Restore
- Windows Defragment and Optimize Drives
- Windows Disk Clean
- Windows Resource Monitor
- Windows Performance Monitor
- Computer Management and Administrative tools
 - Task Scheduler
 - Event Viewer

- Device Manager
- Disk Management

Preventative Maintenance Strategies

- Operating system and software Updates
- Antivirus Software
- Check RAM
- Check Hard disk – including defragmentation
- Dust removal
