1 Policy

IT WORKS shall implement procedures to monitor and maintain compliance to applicable statutory, regulatory and contractual cyber security requirements.

This policy supports and extends the IT WORKS Information Security Policy.

2 Scope

This Policy applies to the management of all computer equipment and software used by IT WORKS.

3 Definitions

Computer equipment	• computer processors of all types, whether owned or leased directly by IT WORKS or provided for IT WORKS use by an External Service Provider • desktop computer equipment • laptop and other mobile computer equipment • smartphones and similar devices • associated peripheral equipment and accessories
Software	• software licensed directly for use by IT WORKS • software licensed for IT WORKS use by an External Service Provider or other party • internally developed software • software that is free of any licensing or copyright restrictions • associated software documentation.
ICT assets	Includes computer equipment and software as defined above

4 Related Policies

ITWORKS/169	ICT Access Control Policy
ITWORKS/173	Mobile and Portable Storage Devices Security Policy
ITWORKS/188	Fraud and Corruption Policy and Procedure
ITWORKS/143	Procurement – Disposal Policy – Goods (including inventory)

5 Procedure

This procedure defines the obligations relating to the management and use of IT WORKS computer equipment and software and will assist in ensuring:

- appropriate management processes to control the use of IT WORKS computer equipment and software
- adequate protection of IT WORKS computer equipment and software from security threats that may cause loss or damage to IT WORKS
- informing all personnel of their responsibilities and obligations with respect to the use of IT WORKS computer equipment and software.

5.1 Obligations for Staff

Computer equipment and software are provided by IT WORKS for the use of personnel in performing their allocated duties. The provision of any computer equipment or software implies no rights of ownership or exclusive use but does obligate personnel to take all reasonable precautions to preserve it in good working order.

5.2 Purchasing

The purchase of computer equipment must meet the minimum standards for hardware and software specified by the South Australian Government, IT WORKS procurement policies and procedures.

Purchase requests that are outside the standards must be forwarded to ICT Services through the ICT Service Desk for vetting and endorsement prior to the order being placed.

5.3 ICT Asset Register

ICT Services will maintain an ICT Asset Register according to Procurement Policies and Procedures applicable to ICT assets. All ICT Assets must be entered into the IT WORKS Configuration Management Database. This database will be kept current with equipment information including asset number, serial number, location, cost, purchase date, date supplied, purchase order number, supplier and configuration of hardware, and any other equipment associated with the asset.

5.4 ICT Asset Auditing

ICT Services will perform periodic audits of ICT assets to reconcile equipment and software against the ICT Asset Register.

5.5 Equipment and Software Configuration

All computer equipment and software will be installed and configured by ICT Services based on a Standard Operating Environment (SOE) unless otherwise approved by the Manager of Technology Services or their delegate.

Standard configurations for desktops, laptops, and other ICT equipment and software must not be interfered with by equipment users. Contact the ICT Service Desk for assistance.

Personnel must not install any software on any IT WORKS computer equipment without the approval of ICT Services.

The installation of software that is not licensed to IT WORKS is strictly forbidden and may result in disciplinary action if identified.

5.6 Data backups

External service providers are responsible for backing up data on servers they manage, by contractual requirements.

Individual business units are responsible for backing up data on servers they manage as well as their desktop and mobile computing equipment.

5.7 Software removal

IT WORKS personnel must inform the ICT Service Desk when they have software loaded or in their possession that is no longer required, so that it can be removed promptly.

5.8 Software media storage

ICT Services will keep any original software media (including copies on disk or optical media) and a backup copy will be kept by the business unit if necessary.

Software media must be stored in a secure location at all times with access restricted to authorized personnel. Suitable secure locations include office safes, locked cabinets, and office areas with access restricted to authorized personnel.

Individual business units should maintain appropriate records/historical information in regard to any software authorized for purchase by ICT Services, including licensing condition(s), number of copies, and a description of the software's purpose.

5.9 Removal of ICT assets from IT WORKS premises

IT WORKS information security policies and procedures apply equally to IT WORKS hardware and software assets when taken off-site from IT WORKS premises. Computer hardware and software must be adequately protected when off-site, and appropriate controls must be in place for such assets taking into account the classification of information on the equipment.

When computer equipment and software are made available for personnel to remove from IT WORKS premises for work-related use, written authorization from their supervisor or manager must be obtained.

The supervisor or manager must arrange through the ICT Service Desk for the ICT Asset Register to be updated to reflect the new location of the loaned asset(s), except where the loan is short-term.

A condition of approval for the removal of computer equipment from IT WORKS premises is that the equipment must be returned to ICT Services every six months or less to ensure software applications are maintained at an appropriate level, to assist in asset management, and to ensure ongoing compliance with the IT WORKS standard operating environment. It is the responsibility of the person assigned the computer equipment to ensure this occurs.

Computer hardware taken off-site from IT WORKS premises for repair, disposal, and sale must also be adequately protected.

5.10 External use of IT WORKS ICT assets

Where IT WORKS information assets (including information, software, and hardware) are to be used at home or an external location, staff must take reasonable precautions to protect the equipment including:

- ensuring that the assets are located in areas that are not visible to the public
- ensuring that the location of IT WORKS assets is secure when unattended
- ensuring that the assets are not used by unauthorized people, including family members
- ensuring that computer assets are not left visible in a vehicle, even if it is locked.

For more information refer to the ICT Remote Access Policy, Mobile and Portable Storage Devices Security Policy, and the ICT Access Control Policy.

5.11 Return of IT WORKS ICT assets

All personnel are responsible for returning all ICT assets provided to them by IT WORKS when they cease any period of employment, or other work arrangement(s), with IT WORKS, when they no longer have a requirement to use the ICT assets for their allocated duties, or at the expiry of the loan agreement. Where relevant, the ICT Asset Register must also be updated.

5.12 Reporting stolen, lost, or damaged IT WORKS ICT assets

Personnel are responsible for safeguarding ICT assets provided to them by IT WORKS and reimbursement for any loss or damage may be sought from them.

Personnel must report to their manager any loss or damage to the IT WORKS ICT assets provided to them as soon as such loss or damage is noted (under no circumstances should personnel attempt to repair any damaged assets). The report will then be handled as follows:

- The circumstances will be reported by the manager responsible to the business unit director or manager.
- All instances of potential fraud or other misconduct must be reported by the director or manager of the business unit, as required in the Fraud and Corruption Policy and Procedure.
- The director or manager of the business unit, in consultation with the manager responsible, will review the circumstances and decide regarding the recovery of costs and/or any other action deemed appropriate.
- Where recovery is to be made, a memo detailing the circumstances will be prepared by the manager responsible and submitted to the director or manager, who will arrange for an invoice to be raised.
- In the case of loss or damage to assets provided to a business unit, ICT Services will replace or repair the asset, and the invoice will be sent directly to the business unit concerned for the cost. The circumstances of the loss and any internal recovery are the responsibility of the business unit concerned, not ICT Services. The ICT Asset Register must also be updated to reflect any changes.

5.13 Disposal and re-use of IT WORKS ICT assets

IT WORKS computer equipment and associated media that is to be reused must be cleared of sensitive information or sanitized before being used for another purpose.

Sanitization may be by any of the approaches below:

- sanitizing the media within the equipment
- removing the media from the equipment, then sanitizing or destroying the media individually and disposing of it separately
- destroying the equipment in its entirety.

Computer equipment must be disposed of according to the IT WORKS Procurement - Disposal Policy – Goods (including inventory).

6 Responsibilities

6.1 Specific responsibility of IT WORKS staff

All IT WORKS staff are required to comply with the Information Security Policy and related policies, procedures, and standards of IT WORKS, the Code of Ethics, and to play an active role in protecting information assets.

6.2 Review of this Policy

IT WORKS Policy must be reviewed at least every two years, but may be actioned earlier according to strategic priorities, reforms, or feedback received.
